

LUT School of Engineering Science

CT70A9110 Software Development Skills: Front-End

Learning diary

Spring 2022

LEARNING DIARY, FRONT-END MODULE

4.1.2022

Konsta Keski-Mattinen, 0568752

Part 1

20.12.2021

I checked in on this course and got straight to work modifying my vscode development environment according to resent Mikrobitti article and the course material.

As I am familiar with software development with Git, I challenged myself to follow [these](#), semantic commit messages to get into the habit. Sass was totally new to me, and the library needed to be changed from node-sass to sass due to visual studio code locking the file as it's open. I had to revise css as I am more of a back-end kind of guy.

Part 2 & 3

20.12.2021

More revising and learning with css. Transitions and different sizes, such as rem and fr, were new to me. Some revising needed to I learned a new key binding in vscode as well, shift+alt+down.

Part 4 & 5

22.12.2021

Time has come to have another round against mobile responsiveness after my defeat in react code camp. This time with not trying to find a 'one size fits all' solution I split the devices among different sizes and made a new gridding to each.

Part 6

29.12.2021

Nothing totally new to me was in this part, mostly just revising.

Part 7

4.1.2022

GitHub Pages as a system was totally new to me but the process of hosting was not. In this part I mostly worried about the content itself.
